Table attributes

 Expand table

| Attribute | Value |
|-------------------------------|------------------------|
| Resource types | - |
| Categories | Workloads |
| Solutions | InfrastructureInsights |
| Basic log | No |
| Ingestion-time transformation | No |
| Sample Queries | - |

Columns

 Expand table

| Column | Type | Description |
|----------------|--------|---|
| _BilledSize | real | The record size in bytes |
| Computer | string | |
| CounterName | string | |
| InstanceName | string | |
| _IsBillable | string | Specifies whether ingesting the data is billable. When _IsBillable is <code>false</code> ingestion isn't billed to your Azure account |
| IsSystemDisk | string | |
| LogicalDisk | string | |
| MemoryInstance | string | |
| NetworkAdapter | string | |
| ObjectName | string | |

| Column | Type | Description |
|----------------------|----------|---|
| PerfCounterValue | real | |
| PhysicalDisk | string | |
| ProcessorInformation | string | |
| ProcessorInstance | string | |
| SecureChannel | string | |
| ServiceName | string | |
| SourceSystem | string | The type of agent the event was collected by. For example, <code>OpsManager</code> for Windows agent, either direct connect or Operations Manager, <code>Linux</code> for all Linux agents, or <code>Azure</code> for Azure Diagnostics |
| TimeGenerated | datetime | |
| Type | string | The name of the table |
